Example Candidate

Senior Platform Engineer

Remote | example.candidate@example.com | example.com | github.com/example-candidate

Summary

Platform engineer focused on reliable distributed systems, Kubernetes delivery, and practical technical leadership.

Experience

Senior Platform Engineer, Example Systems Jan 2022 – present

- Reduced median incident recovery time from 45 minutes to 8 minutes by standardizing service health signals and automating rollback decisions.
- Increased safe production deployment frequency from weekly to daily through reusable Kubernetes deployment checks and progressive delivery.
- Mentored three engineers through design reviews and incident retrospectives, enabling each to own an on-call service.

Selected Projects

Queue Recovery Controller Mar 2023 – Nov 2023

Reliability controller for stalled queue workloads

- Cut stalled-work recovery p99 from 12 minutes to 70 seconds with lease-based claims and bounded retries.
- Preserved at-least-once processing while making duplicate work observable and safe to replay.

Skills

Backend: Python, PostgreSQL, distributed systems, API design

Platform reliability: Kubernetes, progressive delivery, observability, incident response

Education

Example University, BSc in Computer Science 2012 – 2016
